Changing the Game

Stark Tech meets Dragon Tech

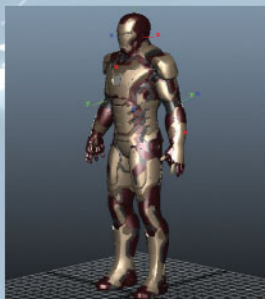

Ever since computer CGI technology has been integrated into Hollywood films, we've seen traditional special effects and craftwork becoming a thing of the past. After all, computers enable movie producers to perform extraordinary feats, at a fraction of the time. A true "Game Changer". Dragon Models has always believed the same can be applied to toys and collectibles.

Over the past decade, Dragon Models has invested heavily into adding the most sophisticated CAD/CAM software and perfecting our slide-moulding technologies for our in-house product development team (D.A.R.T.). The results are numerous industry awards, and being widely recognized as the top armor model kit maker in the world.

Dragon has now applied this technology into our Marvel products. Utilizing official 3D data from Marvel, our team then converts them into our own working 3D files. From there, they are programmed into fully automated state-of-the-art mould making machinery, and the completed moulds are utilized in the production of the final product. Using computers in every step during the design and engineering process eliminates the element of human error, and the result is a highly accurate and detailed product that is also consistent in quality, and can be produced in significantly less time.

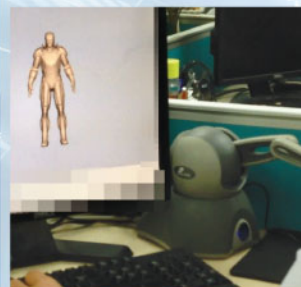

Dragon Models is proud and excited to deliver to you our series of high quality, crisply detailed, and true to the original IRON MAN 3 Armor figures in the coming months.

Official Marvel 3D data files are analyzed and entered into our sophisticated 3D software.

Each armor piece is carefully studied and measured to ensure accuracy and detail.

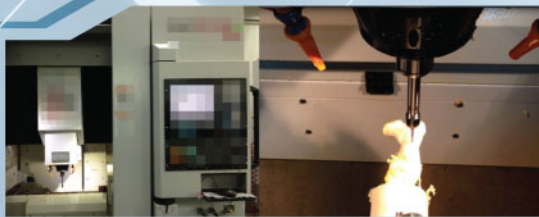

The 3D data is then converted into our own working 3D format by our experienced engineering team (D.A.R.T.)

Our 3D model is then ready for additional layering, fitting, and for setting the pose.

Once the 3D file is completed and checked for any inaccuracies, the data is programmed into a state of the art six-axle prototyping machine. The prototype then undergoes a series of tests and measurements to ensure that the final product is accurate and detailed.

The final data is then used in combination with our award winning 25+ years of experience plus top of the line moulding machinery to create

plastic moulds that are crisply detailed and of the highest quality.

The end result is an accurate, crisply detailed, Dragon Models Action Hero Vignette!

Dragon Models and DART (Dragon Advanced Research & Technology) are excited to introduce our latest innovation in 3D technology. There are 2 kinds of figures – "1/9 Scale Model Kit" & "Action Hero Vignette".

"1/9 Scale Model Kit" allows you to build and customize your own figure. Each kit's sprues are represented in a basic color and a simple display base. With just the snap of a few parts and your modeling techniques, you can create your own style of desktop display!

"Action Hero Vignettes" is a hybrid between a display figure and a kit. Each Vignette comes pre-colored, unassembled, and includes a diorama display base. With just the snap of a few parts, you can have a highly detailed desktop display!

Utilizing official 3D files from the studios themselves, our team enhances them with our own 3D technology and programs them into our state of the art mould making machinery. The result is a highly accurate and finely detailed product that is consistent to official movie studio specifications.

Additionally, the figures are set in a movie suggested pose so that the body portions won't be deformed when the poses are changed.
